Comments:

Great job! After a somewhat shaky Sprint 4, your Sprint 5 has you almost back on track. There's a lot of work to do but a path to getting it done.

You're focusing on important features.

It's a shame that log-in wasn't finished in this sprint. Because the website can be viewed by anyone with a web browser, requiring users to log in is a critical feature in order to preserve both confidentiality and integrity on the site. Furthermore, it's a tricky feature that requires extensive testing.

Everything you've got looks pretty good, but I wish you had just a bit more done so that Sprint 6 was all polishing.

The tests are good tests, but a testing script would be better. By script, I don't mean code that a computer follows. I mean the older version of a script, a series of actions that a human follows. By creating a clear script, anyone could run the tests and verify that they work.

I'd like to see a little more content in the retrospective. Likewise, you could make the existing content clearer. What about "letting the team know when you know you can't show up" didn't go well? Was that a widespread problem? Likewise, please use complete sentences and proofread the document. I suspect

that you do not have a "grove."
